IDEMPIERE QUICK START – SALES ORDER & SHIPMENT

Access into Idempiere with the user and password, we use the standard login *SuperUser*

SALES ORDER OF A PRODUCT STORED INTO WAREHOUSE AND CREATE THE SHIPMENT DOCUMENT

- **Open “Sales Order” window and press “new” for creating a new sales order**
 - The sales order line has “SemeZucca” product and the qty sold if 570.
 - Use the priceList for sales and want to change the sales order document number sequence
 - I can copy line directly from PurchaseOrder
 - In this case we proceed manually
 - The product I want to sale is with a certain lot number. The lot number is stored with the product into warehouse. The lot number is one of the attribute instance of a product
 - The price came from sales list price or the price written into Bpartner Line Price
- **Open “Shipment” document and select a product into the locator**
 - The shipment document could be generated automatically or manually, we choose for the second way
 - Try to change the sequence number of shipment
 - Select the sales order for creating the shipment document

THANK YOU!
